Certificate in Convergence Technology
Jul 2010 – May 2012

Highlights

Pi-xcels Feb 2024 – Present
Staff Software Engineer Singapore

- Actively collaborated between fullstack, devops and IoT team to develop a cohesive cross-platform product.
- Ensure accountability in project resources usage, eliminating underutilized staging environments.
- Introduce docker into developer lifecycle, reduce onboarding time of new developers from 1 month to 3 days for first PR.
- Investigated C++ JNI threads to resolve race conditions and missing class loader issues.
- Maintain updated changelog documentation for partner SDK.

Airasia Jan 2021 – Jan 2024
Tech Lead Sepang, Malaysia

- Work closely with product managers to build product roadmaps for check-in, boarding pass as well as operational network intelligence.
- Succesfully delivered 8 projects with different team sizes ranging from 2 to 7 developers.
- Migrated staff identity sync system from ETL pipelines to Event-driven architecture, reducing infrastructure costs by 75%.
- Applied TDD methodology to exchange rate API to ensure correct conversion applied to comply with regulatory requirements.
- Using Google Cloud Trace to identify critical path in booking validation, reducing 99% latency from 6 seconds to 2 seconds.
- Introduced dynamic feature flags in self check-in process to support business needs for up-to-date regulatory compliance declarations and notifications to meet each country's travel restriction requirements.

LuxTag Jul 2018 – Dec 2020
Team Lead Cyberjaya, Malaysia

- Plan, build and deploy core NEM blockchain infrastructure using Ansible.
- Open source build toolchain for NEM Catapult (https://github.com/luxtagofficial/catapult-server).
- Presented LuxTag at Blockchain Investors Summit 2019.

Full-Time Training in Anaheim Apr 2016 – Dec 2017
Team Lead Anaheim, California

Built attendance tracking system utilizing RFID tags and iPad web UI for seating chart management.
